

COMPLETE WAREHOUSE INVENTORY SOLUTIONS

WHY DATASCAN?

Full physical inventory counts at the warehouse level are shown to help retailers avoid stockouts, overages and misplaced merchandise, which can be costly in today's omnichannel world. However, warehouse counting can pose a number of challenges for retailers, perhaps none so prevalent as the labor and downtime required to perform the count with existing staff.

Datascan's unique warehouse counting solutions are designed to address these challenges. We combine world-class SOC compliant counting technology, including bin location tracking and reconciliation, with the staffing resources needed to conduct an accurate and efficient count. Depending on your unique needs, we can provide hundreds of additional staff over multiple shifts, with supervision if required and with minimal to no travel costs.

OUR SOLUTIONS

- Supplemental staffing and full-service supervised counts
- Datascan's robust hardware and software technology
- Visibility into the counting process
- Reduced travel costs
- Custom software with bin location tracking and reconciliation
- Teams of 10-150 counting staff over multiple shifts
- Flexible scheduling, with availability generally within 30 days
- Experience and expertise with millions of square feet of warehouse merchandise counted in the past year

Labor

We can provide teams of 10-150 counting staff, with supervision if desired, over multiple shifts.

Technology

Our powerful software gives you visibility into your counts with a SOC compliant and secure platform.

Results

You receive actionable data insights to help you better implement your omnichannel strategy.
