DATASCAN

YOUR SOLUTION, NOW.

Today's retailers are focused on improving accuracy, cutting costs, validating on-hand accuracies and enhancing customer engagement. Choosing self-scan assures an all-around better solution, helping retailers achieve a reliable and efficient count.

CUSTOMER SUCCESS TEAM - In our rapidly changing retail environment, retailers can leverage the years of experience Datascan brings in ensuring accurate counts and actionable data. Datascan's dedicated teams do the heavy lifting for you by becoming an extension of your own team.

SAAS PORTAL - The hub of the Datascan solution is its fully configurable and licensed SaaS portal used to execute, monitor and report on each individual count. Customers can configure their process management, count planning and success criteria, portal views, alert escalation and reporting options.

PRE-PROGRAMMED SCANNER - Datascan provides the industry's only fit-for-purpose scanner, ergonomically designed for fatigue-free, multi-hour scanning. Our scanner incorporates the latest imaging technology and features that enhance productivity and count accuracy, saving customers significant labor hours.

STORE COMMUNICATIONS EQUIPMENT - Datascan scanners ship pre-loaded and ready for scanning. Our scanners can upload count data over a customer's WiFi, or we can provide 3G/4G routers as part of our solution offering.

DATA AND FILE MANAGEMENT - The inventory master file is required pre-shipment of scanners to a store. After the count, a stock on-hand file is provided by the store so we can enable and track accurate variance analysis with minimal effort from a retailer's IT team.

24/7 GLOBAL HELP DESK - Datascan provides class-leading 24/7 support to corporate and store management teams through a network of regional Call Centers, supporting 47 countries around the globe.
